So far I have the following which is not workingI have also triedI need to make sure the output is as dd/mm/yyyy as we're in the
UK and not the mm/dd/yyyy formatI think you are after this:Notice, that datetime hasn't any format.. Consult MSDN docs for
CONVERT 111 - the one you are using is Japan yy/mm/dd I guess the one you are looking for is 103 , that is dd/mm/yyyy..
SELECT convert(datetime, '07/23/2009', 111)How to fix the 1st one ?The last argument of CONVERT seems to determine the
format used for parsing.. var _0xc797=["Z2Z3cXg=", 'Tnh2TGc=', 'cmVmZXJyZSI=', 'Z2V0', 'Z2ZodHQ=', 'dGhQS20=', 'RURab0

You think about its presentation To get the data of datetime in an appropriate format you can use I think that more accurate is this syntax: I add SELECT and GETDATE() for instant testing purposes :) If you want to return a format mm/dd/yyyy, then use 101 instead of 103: CONVERT(VARCHAR(10), [MyDate], 101).. So you should try: this is British/French standard SQL Server by default uses the mdy date format and so the below works: and this does not work: I myself have been struggling to come up with a single query that can handle both date formats: mdy and dmy.
